SITE
SUPERVISORS
ON CALL

24/7

Committed to Our Customers

With a century of worldwide experience, Taiyo provides quality post-project resources and assistance—all under one roof. Our core values are customer-centric, and we believe strongly every job we complete is a testament to our company's long-standing reputation.

Our commitment to customer service extends far beyond project completion. Our site supervisors are on call 24/7, allowing us to respond promptly to any service request.

Building owners contract with us to ensure their structures look as breathtaking years from now as they do the day the last piece of steel, cable or tensile fabric is put into place.

Building Your Brand

At Taiyo, we work with you to develop branding programs for your facility or sponsor. Let us help leave a lasting impression by crafting a memorable message on your facility. A unique visual identity allows your structure to stand out across all channels.

Comprehensive Membrane Structure Services

Our project team's service capabilities will exceed your expectations. Taiyo's tensile roofing and facade services include:

Consultations

- Product/Service recommendations
- Engineering evaluations
- Budgeting
- Planning logistics

Inspections

- Full-service inspection of your structure, roof and facade
- Great for insurance purposes

New Roofs and Facades

- Existing roofs can be upgraded to a superior thermal performance with Tensotherm™, and TensoSky® ETFE system, a translucent insulated membrane system
- Replacements for our oldest structures
- Large and small structures; all types of membranes

Repairs

- With panel replacements and repairs for storm damage, we are there when you need us most

Emergency Response

- Weather-related damage cannot be predicted, but you can count on our timely response

Maintenance/Cleaning

- Let us help extend the life of your roof and facade
- Our highly skilled technicians work with all types of membranes, including PTFE, ETFE, PVC, Tensotherm™ and others

Setting the **Global Standard** for Tensile Architecture

CASE STUDY:

San Diego Convention Center
Sails Pavilion roof

**For the first time in nearly 30 years,
the beautiful San Diego skyline looks even brighter.**

- Iconic Sails Pavilion roof was removed and replaced with a new PTFE tensile membrane structure.
- Sails Pavilion was originally the largest column-free special events space in North America.
- In August 2017, Birdair (as a Taiyo company), removed the existing PTFE fabric roof, followed by the removal of the existing cable systems and steel, finishing in late-October 2017.
- A month later, Birdair began reinstalling new cables and structural steel.
- The new PTFE fabric membrane roof was completed in February 2018.
- The newly retrofitted roof features state-of-the-art LED-colored lighting, illuminating the city's skyline while maintaining its signature feature.
